Renitor

Professional liquid calcium with Advanced Ace-X Technology.

LIQUID CALCIUM · AS REQUIRED — 2026

Renitor

Professional Liquid Calcium

ANALYSIS 1-0-0-0 + 6 Ca · ADVANCED ACE-X

Renitor is a first-class specialty liquid calcium designed for superior uptake. The unique Ace-X delivery method both feeds calcium to the root-zone and releases formerly insoluble calcium already held in the soil. It is unaffected by cold root temperatures and can lower soil pH over time by burning off bicarbonates.

Built for root-zone application, Renitor also helps ameliorate high sodium levels — improving the structure of heavy clays over time — and is especially useful for high calcium-demanding crops prone to fruit deformities, or crops planted in overly alkaline or sodic soils. Winter often provides the best uptake benefits over other calcium forms.

AT A GLANCE

ANALYSIS	Total N 1.0% (N-NH ₂ 1.0%) · Ca as acetate 6.2% w/v
RATE	Fertigation 5 – 10 L / ha · best used with a pre-plant lime application
SIZES	1000 L IBC
BEST FOR	Calcium-demanding & alkaline/sodic soils · peak uptake in winter

PROVEN RESULT — delivers 5× the calcium per unit of nitrogen versus calcium nitrate, for precise calcium without the excess N.
