

Forte Catalogue

Forte

Microbe and Nutrient Enriched Compost

Forte is a fortified compost product, enriched with our Gaia, Aequor and a specially sourced *Trichoderma* spp. blend. Forte represents the next generation of microbial inputs, that holistically improves soil health and crop yield.

By employing *Trichoderma* spp., Forte eliminates any pathogenicity risks that can arise from poor quality compost. The beneficial anaerobic micro-organisms are added to increase on-farm performance. These anaerobic microbes can establish in even the harshest conditions and work synergistically with our renowned *Ascophyllum nodosum* based bio-stimulant blend, Aequor to promote profuse root development. With the addition of organic colloid fertiliser for an improved nutrient profile, Forte represents an exceptional base fertiliser to improve yield and soil outcomes, all while lowering dependence on synthetic fertilisers.

The uses of compost are well established and with Forte all these benefits are magnified. Growers who choose to amend their soil pre-planting and on mature orchards can expect an increase in nutrient and water retention, improved soil micro-organism activity and yield benefits as well as favourable environmental outcomes.

- Improves nutrient retention and soil CEC.
- Improves moisture retention and soil structure.
- Increases soil micro-organism activity.
- Reduces synthetic fertiliser costs and dependence.
- Stimulates root growth and flowering through the addition of seaweed extract and anaerobic micro-organisms.
- Advantageous environmental outcomes.
