What is Ace-X?

Ace-X is a unique delivery method that drives superior nutrient root-zone uptake. Ace-X is designed to not only supply ions to the root-zone but also react with insoluble fertiliser, particularly calcium and magnesium to provide a highly efficient nutrient delivery system. The delivery method drives superior uptake even in cold temperatures and can lower soil pH over time by burning off bicarbonates.

Rates and Guidelines:

Fertigation: 5 - 10L/ha. Recommended to use with a pre-plant lime application. Renitor will lower soil pH.

Warning: May cause skin irritation. May cause eye irritation. Read directions before use. Keep out of reach of children. Agitation may be required prior to application.

Typical Analysis

Total-N _____1.0% w/v

N-NH₂ _____1.0% w/v

Ca (as acetate) _6.2% w/v

Renitor

What is Renitor?

Renitor is a first-class specialty Calcium product in an acid form. The unique Ace-X delivery method ensures that Calcium is both delivered in a superior manner to the root-zone but also releases formerly insoluble Calcium from the soil. Renitor is unaffected by cold root temperatures and can lower soil pH over time by burning off bicarbonates.
